The nuclear medicine department was relocated into new space within the Physician's Pavilion in 2007. Within this space, there are four dual-head SPECT gamma cameras. In addition, a PET CT scanner is presently located within the Cancer Center.

The Stratton VA Medical Center is an approximately 100-bed facility serving veterans in 22 counties of upstate New York, western Massachusetts, and Vermont. A variety of inpatient and outpatient services are offered in this setting. The radiology department performs approximately 53,000 examinations per year, including 6000 CT, 4200 MRI and 5000 ultrasound studies. The department is home to a Philips 1.5 Tesla Intera magnet, a GE CTI single slice CT scanner, two GE Logic 9 ultrasound units, two GE advantx SFX 30 fluoroscopy units and a Philips Integris 2000 angiography suite. Dictation and transcription at the VA is performed utilizing the PowerScribe Workstation v.4.7 which is fully integrated with the Philips iSite Radiology application. While rotating at the VA, residents are in daily contact with the main Albany Medical Center radiology department through attendance of noon conferences.
