Who Should Attend

This program has been designed to be of interest to neonatologists, pediatricians, physician assistants, neonatal nurse practitioners, nutritionists, neonatology fellows, pediatric residents and lactation consultants whose practice involves the delivery of care to preterm infants.

About the Symposium

Every year in the United States preterm delivery affects 1 in every 10 births, or approximately 400,000 births each year.

The care of this very vulnerable population of infants has become exceedingly more complicated as survival rates improve. Nutritional support of these preterm infants are complex which is related to their special needs and the immaturity of their organ systems. A multidisciplinary approach is very important to provide the best possible nutritional support for these infants. The purpose of this symposium is to provide a comprehensive update reviewing topics of parenteral nutrition associated cholestasis, management of short bowel syndrome, and metabolism and nutritional requirements of the premature infant in the NICU.

Learning Objectives

At the conclusion of this conference, participants should be able to:

- Discuss the effects of protein on amino acids levels in preterm neonates.
- Discuss molecular etiology and fundamentals of parenteral nutrition associated cholestasis discharge.
- Review nutritional support for the premature infant during recovery and after hospital discharge.
- Discuss the effects of diet and growth on cognitive and adult outcomes.
- Optimize nutritional management of infants with short bowel syndrome.
