Our Goals and How We Meet Them

Goal #1. Prepare students to practice as competent Physician Assistants

- 99% of students enrolled in the last five years graduated.
- 100% of students graduating passed the PANCE, 99% on the first attempt,
- 100% of Employer’s responses in 2016 rated new graduates at or above entry level in 10 key areas, with 47% “significantly above entry level”.

As an AMC graduate, you can expect to be employed as a physician assistant immediately upon completing certification and licensing. The Physician Assistant profession is one of the fastest growing in the country and demand for AMC graduates far exceeds the supply.

Goal #2. Prepare, promote and encourage graduates to practice in underserved, rural, and culturally diverse settings

- 100% of students graduating completed at least two clinical rotations in these settings
- Every student demonstrated cultural competency during patient encounters in the clinical phase

Goal #3. Prepare graduate-level Physician Assistants to engage in the scholarly activities of the profession.

- 100% of graduating students demonstrated the ability to apply evidence-based medicine methods to patient care.
- 100% of graduating students prepared and presented a publication quality poster to the AMC community.

We are meeting our goals
